The Fund is subject to stock market risk, which is the risk that stock prices overall will decline over short or long periods, adversely affecting the value of an investment. Risks of one's ownership are similar to those associated with direct ownership of real estate, such as changes in real estate values, interest rates, cash flow of underlying real estate assets, supply and demand, and the creditworthiness of the issuer. International investing poses special risks, including currency fluctuations and economic and political risks not found in investments that are solely domestic. Options involve risk and are not suitable for all investors. Writing a covered call option allows the fund to receive a premium (income) for giving the right to a third party to purchase shares that the Fund owns in a given company at a set price for a certain period of time. There is no guarantee of success for any options strategy. Increased portfolio turnover may result in higher brokerage commissions, dealer mark-ups and other transaction costs and may result in taxable capital gains. Investments in lesser-known, small and medium capitalization companies may be more vulnerable to these and other risks than larger, more established organizations.

Not all investors are eligible to purchase load-waived shares. Ratings and other statistics for load-waived versions of the class A shares of mutual funds reflect the investor experience for those individuals who do not pay the funds' front-end sales load, such as retirement-plan participants or those investors who commit to invest a certain amount.
