July 2016

---

The four-month rally continued in July with the S&P 500 gaining another 3.69%. The combination of low global and domestic bond yields, continued reluctance by the fed to raise rates and decent economic numbers created favorable conditions for equities in July. Additionally, corporate share buybacks continue to move the indices higher. The S&P 500 has now rallied 8.82% since bottoming out on June 27 after the Brexit vote.

The James Alpha Managed Risk Domestic Equity Fund was up 1.73% in July versus 3.69% in the S&P 500 Total Return Index. The Fund is now up 0.50% after the Fund's first full year. Conversely the Morningstar Long/Short Index is down 3.63% and the S&P 500 Total Return Index is up 5.61%. We were able to reduce volatility versus the S&P by 40.5%.

Source: Bloomberg, 2016.

Volatility, as measured by the CBOE Volatility Index (VIX), was down 24% in July and made a year low close on July 20. As a result, the Fund has a smaller call position but continues to maintain downside convexity.

## Returns

	As of 7/31/16			As of 6/30/16
	3-Month	6-Month	1-Year	Since Inception
JDIEX	2.67%	6.04%	0.50%	-1.21%
S&P 500	5.82%	13.29%	5.61%	1.86%

Investors cannot directly invest in an index and unmanaged index returns do not reflect any fees, expenses or sales charges. Performance data quoted above is historical. Past performance does not guarantee future results and current performance may be lower or higher than the performance data quoted. The investment return and principal value of an investment will fluctuate, so that shares when redeemed may be worth more or less than their original cost. The Fund's management has contractually waived a portion of its management fees until December 31, 2016. The performance shown reflects the waivers without which the performance would have been lower. Total annual operating expenses reduction/reimbursement are 2.45% for A Shares, 1.99% for I Shares, and 3.20% for C Shares; total annual operating expenses before the expense reimbursement are 2.42% for A Shares, 2.17% for I Shares and 3.17% for C Shares. The maximum sales charge on purchases of A Shares is 5.75%. A redemption fee of 2% will be levied on shares held 30 days or less. For performance information current to the most recent month-end, please call 888.814.8180.

## DEFINITIONS

**Brexit:** An abbreviation of “British exit” that mirrors the term Grexit, refers to the possibility of Britain’s withdrawal from the European Union.

**CBOE Volatility Index (VIX):** Shows the market’s expectation of 30-day volatility. It is constructed using the implied volatilities of a wide range of S&P 500 index options. This volatility is meant to be forward-looking and is calculated from both calls and puts. The VIX is a widely used measure of market risk and is often referred to as the “investor fear gauge.”

**Morningstar Long/Short Equity Category:** Category as defined by Morningstar for long/short equity.

**S&P 500 Index:** An index of 500 stocks chosen for market size, liquidity and industry grouping, among other factors. The S&P 500 is designed to be a leading indicator of U.S. equities and is meant to reflect the risk/return characteristics of the large cap universe.

**Volatility:** A statistical measure of the dispersion of returns for a given security or market index. Volatility can either be measured by using the standard deviation or variance between returns from that same security or market index.

## ABOUT EAB INVESTMENT GROUP, LLC

EAB Investment Group, LLC specializes in risk mitigation strategies and works with hedge funds, family offices, high-net-worth individuals, investment companies and other advisors. EAB Investment Group uses equity and index option strategies based on a proprietary process with the goal to reduce portfolio risk and increase the probability of success. A deep understanding of options pricing enables EAB Investment Group to manage carry and attempt to mitigate costs over time, and potentially optimize monetization.

## RISKS AND DISCLOSURES

*The portfolio will borrow money for investment purposes. Leveraging investments, by purchasing securities with borrowed money, is a speculative technique that increases investment risk while increasing investment opportunity. Derivatives may be volatile and some derivatives have the potential for loss that is greater than the Portfolio’s initial investment. If the Portfolio sells a put option, there is risk that the Portfolio may be required to buy the underlying investment at a disadvantageous price. If the Portfolio purchases a put option or call option, there is risk that the price of the underlying investment will move in a direction that causes the option to expire worthless. The Portfolio’s ability to achieve its investment objective may be affected by the risks attendant to any investment in equity securities.*

*Shares of ETFs have many of the same risks as direct investments in common stocks or bonds. In addition, their market value is expected to rise and fall as the value of the underlying index or bond rises and falls. It is possible that the hedging strategy could result in losses and/or expenses that are greater than if the Portfolio did not*

*include the hedging strategy. The use of leverage by the Fund or an Underlying Fund, such as borrowing money to purchase securities or the use of derivatives, will indirectly cause the Fund to incur additional expenses and magnify the Fund's gains or losses. Because a large percentage of the Portfolio's assets may be invested in a limited number of issuers, a change in the value of one or a few issuers' securities will affect the value of the Portfolio more than would occur in a diversified fund.*

**Past performance is not a guarantee or a reliable indicator of future results.** As with any investment, there are risks. There is no assurance that the portfolio will achieve its investment objective. Mutual funds involve risk, including possible loss of principal.
